Playtrix bolsters casino products portfolio

20 December 2007

Playtrix of Canada has introduced a new five-player wireless, cashless baccarat game and a new version of its five-player blackjack game.

The wireless, cashless blackjack now has completely revamped graphics and is in full production. When the company introduced the blackjack at ICE 2007, it used the original blackjack game that was selling in the 'wired' cabinets since 1986.

"The game was so good that we did not want to change anything in it; we just added the wireless and cashless practicality to it," said a company spokesperson. "Now, due to the high demand, we kept the same exact proven game but gave it a completely new look."
